### **DETAILED ACTION**

This is a response to the amendment filed 5/12/2004. Claims 19-20 and 22-39 are pending.

#### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation of “wherein said transistor is P-channel transistor” of claim 22, “wherein said a level voltage shift circuit for shifting the input voltage to said transistor” of claim 27, “P channel transistor on a substrate” of claim 34 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified

and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

*Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 28 and 29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In this instant, the specification has failed to describe as to how the back bias circuit shifts the threshold voltage of said transistor to achieve linearity when said resistance load source follower circuit is in active mode as called for in claim 28. As presently understood, the limitations of claims 19 and 28 are intended for figure 15. Figure 15 shows a black box labeled "Back Bias Control Circuit" for receiving the output signal OUT and providing a potential to the back gate of the transistor. Paragraph [0048] briefly states that power consumption in the active mode and in the standby mode is controlled by back bias control circuit. That is, in standby mode and/or when the transistor is in an "off" state, the threshold voltage is increased so that no current flows from Vcc to Vss. However, it is unclear as to how the black box "Back Bias Control Circuit" is enabled to perform the recited function.

Claim 29 is also rejected under 35USC 112, first paragraph for the same reasons as claim

28.

*Allowable Subject Matter*

4. Claims 19-20, 22-27 and 30-39 are presently allowed.

*Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
